

## **Description:**

Harvester Christian Church in St. Peters, Missouri contracted our team to install HVAC, plumbing, fire protection and building automation/energy management systems for their new 1,250-seat Worship Center. The two-story, 38,000-square-foot facility replaces a worship center that the church, which has served St. Charles County for more than 35 years, had outgrown. The project showcases our four primary service areas and highlights the value of working with a single-source mechanical contractor.
